WHO AM I?

I build and ship complex systems in any environment, keep the operational details tight while I do it, and get the teams around me delivering faster too. I have nine years of experience in the banking and fintech space, across enterprise and startup environments; most recently, I rebuilt a startup's core banking infrastructure within three months of joining, while growing users, cutting infra costs 50%, and adding critical features.

WHAT DO I KNOW?

Amazon Web Services

EC2, ECS (Classic and Fargate), Lambda, Route53, S3, API Gateway, Cloudfront, SQS, SNS, CloudWatch, Cloudformation, RDS (Aurora Postgres), DynamoDB, IAM, VPC, and more.

Languages + Frameworks

Java (SpringBoot), NodeJS, Angular, TypeScript, AngularJS, SQL, Bash Scripting, Visual Basic for Applications

Tools

Docker, Jenkins, git, Akamai, IntelliJ, VSCode, Emacs

AI Tools and Integrations: Cursor, ClaudeCode, Codex, AWS Bedrock

EXPERIENCE

Staff Software Engineer, Apr 2024 – Present

Sunny Day Fund

- Continuously owned end-to-end delivery of high-impact features, including:
 - Monthly bank account statements and annual tax forms: researched legal/regulatory requirements, built a serverless, event-driven pipeline for fast, low-cost, and reliable generation.
 - Custom client onboarding flow supporting alternate identity verification for a workforce without company email, shipped in 3 weeks while adapting scope in real time with an enterprise-size client.
- Led the engineering team: managed performance, hired, mentored, and replaced ad-hoc standups with structured planning and clear ownership; trained the team on integrating AI coding tools into the development process.
- Transformed an ad hoc, manually QA-gated release process into a reliable bi-weekly cadence with minimal hotfixes, while introducing proactive monitoring and dramatically accelerating feature delivery.
- Cut AWS spend 50% through infrastructure audit and migration to event-driven architecture, while scaling the platform from 800 to 4,000+ users.
- Owned security and compliance: led SOC 2 Type II audits, kept infrastructure and dependencies current, and built lasting compliance processes.

Full-Stack Developer, Tech Lead, Sept 2017 – Apr 2024

Capital One

- Led the full-life cycle of development for multiple high-traffic, business critical Spring Boot microservices, including requirement gathering, development, testing, AWS infrastructure design and implementation, CI/CD set-up, and ongoing support.
- Architected and helped implement AWS Lambdas to make the credit card marketing site (1M+ daily active users) fully serverless.
- Served as tech lead for the engineering team: led requirement gathering, built out team processes, and mentored developers.
- Go-to person for DevOps, CI/CD, and AWS infrastructure tooling and an internal expert on Capital One's proprietary platform tools; shared that expertise company-wide through internal white papers, talks, and contributions to shared internal repositories.

EDUCATION

Bachelor of Arts, Computer Science, 2013 – 2017

Williams College

Activities: Women's Varsity Lacrosse Team, Computer Science Teaching Assistant, Staff Writer for The Williams Record, Tutor and member of recruitment team for Brayton Elementary After-school Tutoring, Lifeguard.

Awards: NESAC All-Academic Team, Dean's List.

CERTIFICATES

AWS Certified Security - Specialty

Issued 2021

AWS Certified Solutions Architect - Associate

Issued 2018
